Situations like the coronavirus pandemic can quickly become a catalyst for social conflict due to misinformation, rumours and fake news, as we've seen in the past. Every day we continue to see more false information shared throughout our communities, confusing citizens and leaving them unsure where to ask their questions.

The Liberia Coronavirus CivicActs Campaign (CCC) captures rumours and perceptions among communities to eliminate information gaps and debunk rumours before they can do more harm.

COVID-19 Stats for Liberia

166 confirmed cases

0.00332% of Liberia's total population (5 million) already affected by Coronavirus

34% of all confirmed cases have so far recovered

10% of all confirmed cases have so far died

Age range of the affected case is 1 month to 74 years with median age of 41 years

Questions ➡ Facts

What do I do if my body shows some or all of the coronavirus symptoms?

Individuals showing coronavirus symptoms should quickly call the hotline 4455 and notify the operator that you might have COVID-19. While you await the health team, please keep away from your family members, wear protective gear such as a face covering or mask and disinfect surfaces regularly.

Is home treatment the best way to fight the virus in my body?

14 Military Hospital is the only recognized local treatment facility for all coronavirus cases in Liberia. Affected citizens are to contact the 4455 hotline so that the health team can rush them to the unit if they are sick. Home treatment could increase the patient's risk of dying. Out of the 18 reported death cases, 11 death cases took place in the community, as compared to the treatment unit and health facility, where only 1 and 6 death cases respectively occurred.
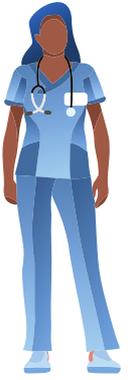

People say people testing positive for coronavirus will never survive, is that true?

Testing positive for the coronavirus does not mean you will die. 18 persons have already recovered in Liberia alone, and worldwide, over 1 million people have recovered so far. But the best way to save your own life and those of loved ones is to do early testing and treatment.

5 STEPS TO STAY HEALTHY

Follow these steps to help prevent the spread of the coronavirus

- Stay at home unless you provide an essential service.

- Keep washing your hands frequently with soap for a minimum of 20 seconds. Use hand sanitizer (with at least 60% alcohol) if soap and water are not available.

- Cover your nose and mouth (with your elbow or a tissue) when sneezing.

- Avoid crowded places and practice physical distancing. If you think you have been exposed to someone with coronavirus, quarantine yourself for a minimum of 14 days and monitor any symptoms.

- The Center for Disease Control (CDC) has confirmed six new possible coronavirus symptoms. They are chills, repeated shaking, muscle pain, headaches, a sore throat, new loss of taste and smell. The original reported symptoms are fever, tiredness and a dry cough.
